## Chapter 1– Introduction

Collier County, the Collier Metropolitan Planning Organization (MPO) and the individual jurisdictions in Collier County have a long history of recognizing the role of safe pedestrian and bicycle facilities in their planning efforts. In 1996, the City of Naples developed and published its *Traffic Accident Statistics Report* to understand the causes of crashes between motor vehicles and other modes.

The MPO's *Comprehensive Pathways Plan*, last updated in 2012, was developed to assist the Pathways Advisory Committee (PAC) in identifying and prioritizing pedestrian and bicycle projects for funding. In the *Comprehensive Pathways Plan*, safety was identified as both an overall goal and a factor by which to evaluate projects for funding prioritization. The Collier MPO Board has voiced support for this goal as well, both in adopting the Plan and in supporting more recent planning efforts. The MPO has also undertaken several *Walkable Communities Studies*. The results of these studies are then integrated into the *Comprehensive Pathways Plan*.

The purpose of this Pedestrian and Bicycle Safety Study is to summarize the tasks of the pedestrian and bicycle safety project. This project provides an analysis of recent bicycle and pedestrian crash data which will enable the MPO and the jurisdictions to identify future pathways improvement projects and other safety initiatives to improve the safety of walkers and bicyclists. This *Pedestrian and Bicycle Safety Study* is comprised of three parts, each intended to better understand the challenges of walking and bicycling in Collier County. The first part of the report summarizes the analysis of 1,067 pedestrian and bicycle crash reports covering five year period from January 2008 to December 2012. The second part describes and summarizes results from public surveys on bicycle and pedestrian crash risks as a supplemental input for understanding the bicycle and pedestrian crash issues in Collier County. The third part of the report includes an analysis of crash locations to identify high-crash corridors and recommendations for including safety more quantitatively in the PAC's project selection process. When reviewed together, the crash report analysis and the survey results create a more complete understanding of the countywide walking and bicycling environment. The evaluation methodology, based specifically on safety, gives the PAC a way to respond directly to the safety goal.

**Figure 1: Collier MPO Comprehensive Pathways Plan**

### Crash Data Source and Qualifiers

Unless noted otherwise, crash records used to compile this report were obtained from the Collier County Crash Data Management System (CDMS). The primary data source for the CDMS is the Florida Department of Highway Safety and Motor Vehicles. Data from the FDOT "All Roads Crash GIS Shapefiles" includes geo-located crash records for the State Highway System, city-maintained roads and county-maintained roads, viewable with typical Geographic Information Systems (GIS) software . As a rule, this data contains nearly all

crashes where an injury or fatality occurs; however, some crashes that included only property damage may not be included in this dataset. As such, the crash data used for this report should be treated as a very complete sample but not as a complete census of all bicycle and pedestrian crashes.

Other data qualifiers include discrepancies between the way that the data is coded using the various data fields in the crash report and the written narrative and diagram that describe the crash event. Florida crash reports include over 100 data points where the responding law enforcement personnel must choose the most appropriate value/descriptor from a list. While the best efforts are made by the reporting officer to accurately reflect what happened, it is often hard to capture the complexity of the crash circumstances using the coded data fields and so the coded data may not exactly match what is written in the crash report narrative. In the case of severe injury and fatal crashes where the walker or bicyclist is unable to speak for himself or herself, it is up to the officer to piece together what happened. In the case of a fatality that occurred after the report was initially filed, the databases may not be updated to reflect the fatality, resulting in discrepancies in the data. All of this is noted not to discount the validity of the data captured from the reports, but to highlight that crash data analysis is a complex endeavor that should be undertaken with an understanding of the context.

### Unreported Crashes

Because bicycle and pedestrian crashes do not always result in a motor vehicle insurance claim, crashes that do not involve an injury that requires emergency medical care are less likely to be reported than “property damage only” crashes between two or more motor vehicles. This is consistent with a 2007 study by Rune Elvik and Anne Borger Mysen, who surveyed 13 crash reporting methodologies in thirteen countries. They found that while 95 percent of all fatal injuries are captured in official crash reports, the number of reported crashes decreases with the severity of the crash, with as few as 25 percent of slight injury crashes being reported.<sup>1</sup> Elvik’s study considered all crashes, not just bicycle or pedestrian crashes. A similar 1998 study completed by Jane Stutts and William Hunter found that bicyclists who were hospitalized or killed were 1.4 times more likely to be reported in state traffic crash files than incidents where bicyclists received emergency treatment but were not admitted to a hospital.<sup>2</sup>

**Figure 2: Bicyclist crossing Airport Pulling Road mid-block**

To help understand the potential for bicycle and pedestrian crash “under-reporting” in Collier County, a survey was developed and distributed to identify the extent to which cyclists and pedestrians either experienced unreported crash incidents or “near misses.” The survey and the results are included in Chapter 2.

## Approach to the Crash Data Analysis

For this analysis, the Crash Data Management System (CDMS) was used to analyze crash data from 2008 through 2012. While this database collects a wide array of coded crash attribute data, a subset of approximately 250 report narratives and collision diagrams were reviewed manually to assess the crash data trends and patterns beyond what could be derived from a review of the coded crash data alone.

In cases where a bicycle or pedestrian crash had been recorded in the CDMS but had not been located, the location was determined as part of this project. In a few cases when a crash location wasn't entered, it was located on a map and the location added to the table allowing for a more precise analysis of crash locations. Generally, additional attention was directed at crash reports that documented an incapacitating injury or fatality.

## Chapter 2 – Pedestrian and Bicycle Crash Data Analysis

In order to better understand what is occurring on the roadways in Collier County, crash report data was analyzed. The following charts and related discussions describe aspects including: the following.

- Time of day
- Day of week, month and year
- Bicyclist and pedestrian age
- Crash location in the County
- Weather conditions, lighting
- Location on the roadway
- Presence or absence of a traffic control device
- Relationship of the crash location to the intersection

### Crash Totals: Collier compared to the state of Florida

As shown in the table below, compared with the State of Florida as a whole, from 2007 to 2011 Collier County experienced fewer pedestrians killed than the statewide average per 100,00 people, and had a lower pedestrian injury rate. During that same time frame, however, the bicyclist injury and fatality rate was higher than that of the state per 100,000 people.

**Table 1: Collier County and state of Florida pedestrian and bicycle crash rate comparison**

	State of Florida		Collier	
	Average (2007 - 2011)	Per 100k Population	Average (2007 - 2011)	Per 100k Population
Pedestrians killed	502	2.67	6	1.74
Pedestrians injured	7313.4	38.90	88	27.43
Bicycle riders killed	106.8	0.57	2	0.62
Bicycle riders injured	4458.2	23.71	94	29.24

\* Most recent available statewide data is 2011

\*\* rates based on 2010 census population

### Crash totals: frequency and severity

The graphs below show the frequency and severity of Bicycle and Pedestrian crashes in Collier County from 2008 through 2012. Total pedestrian crashes have been high for the past 4 years when compared to 2008. Pedestrian injury-crashes appear to have held constant from 2011 to 2012, but have decreased since 2009. There have been 8 or less bicyclist/pedestrian fatalities in each of the 5 years in this study period. While bicycle crash totals have been relatively constant, bicyclist crashes with injuries appear to be decreasing.

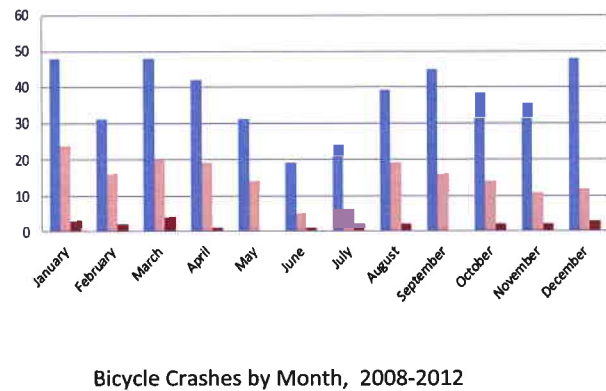

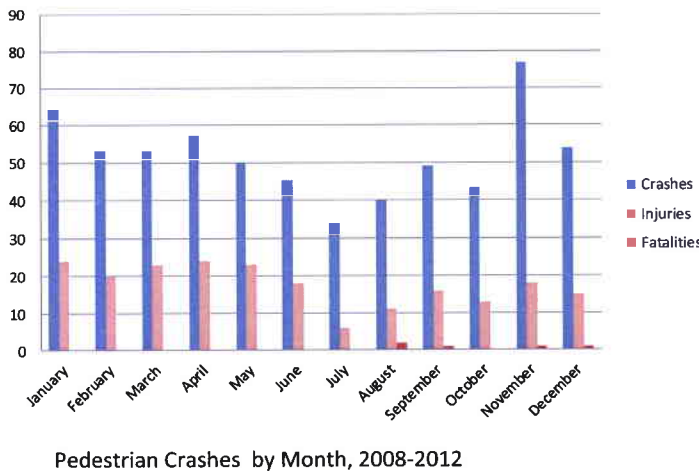

### Pedestrian and bicycle crashes by month

Bicycle and pedestrian crash patterns in Florida tend to mirror the weather and the seasonal variation in population—which is an especially strong factor in Collier County. The charts below show the number of crashes by month.

The worst months for pedestrian crashes (shown in blue) have been January, March and December with 48 crashes each. September also ranks highly with 45 pedestrian crashes. The worst month for pedestrian fatalities was March, followed by December. Generally, there are fewer pedestrian injury crashes (shown in pink) in the summer. The increase in August may correlate with the start of school.

Bicycle crashes follow a different pattern, with 77 crashes occurring in November, followed by January with 64 and April with 57. Similar to pedestrian injury crashes, generally, there have been fewer bicycle injury crashes in the month of July. August has historically had the most bicycle fatalities.

### Pedestrian and bicycle crashes by day of the week

The charts below show the incidence of crashes by day of the week. Overall the highest numbers of pedestrian crashes have occurred on Tuesdays, Wednesdays and Saturdays. Saturdays also have the most fatal pedestrian crashes. The highest number of bicyclist crashes occurred on Tuesdays, but the crashes are more evenly spread out than pedestrian crashes. The highest number of fatal bicycle crashes happened on Saturdays.

Pedestrian Crashes by day of the week, 2008-2012

Bicycle Crashes by day of the week, 2008-2012

### Time of day

This chart shows the occurrences of crashes by hour. Crashes tend to occur in the afternoon and evening, with the greatest number of crashes happening between 8 and 9 pm. This also happens to be one of the hours with the highest number of fatal crashes. The hours between 7 and 9 pm account for almost 22% of fatal crashes.

### Bicyclist age

Bicyclist age at the time of the crash was analyzed and is graphed below. It should be noted that age is not always noted on the crash report, so the set of data from which this is developed is smaller than the other sets. Age of the bicyclist is an important factor when it comes to developing countermeasures because it assists in developing effective public information campaigns and training programs. In Collier County, age groups of 11-20 years and 41-50 are slightly higher than their counterparts, however, the age groups involved in bicycle crashes from ages 11-60 are almost equally represented.

### Pedestrian age

Pedestrian age at the time of the crash was also analyzed and is shown in the graph below. Targeting the groups that are involved in crashes can be an effective way to reduce crash occurrences. However, similar to the bicycle crashes, the age groups involved in pedestrian crashes from ages 11-60 are almost equally represented.

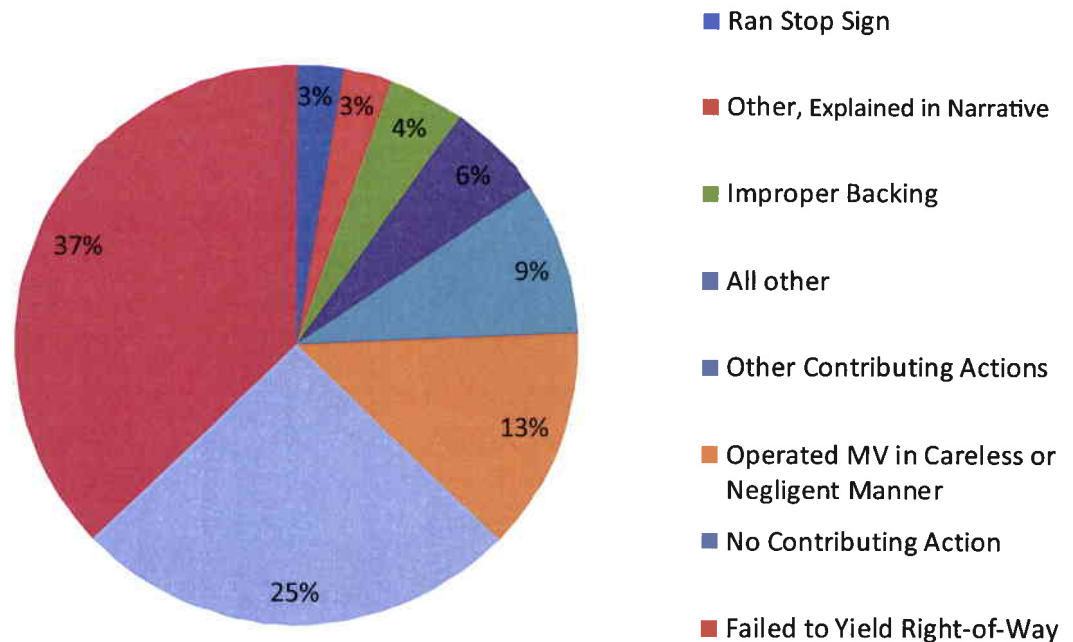

### Pedestrian and bicycle crash locations

While pedestrian and bicycle crashes occur throughout Collier County, several areas stand out with a high number of reported crashes. The denser urban areas of Naples and the surrounding areas and Immokalee accounted for 67% of the crashes. In 21% of the cases no location was identified in the crash report.

### Crash cause

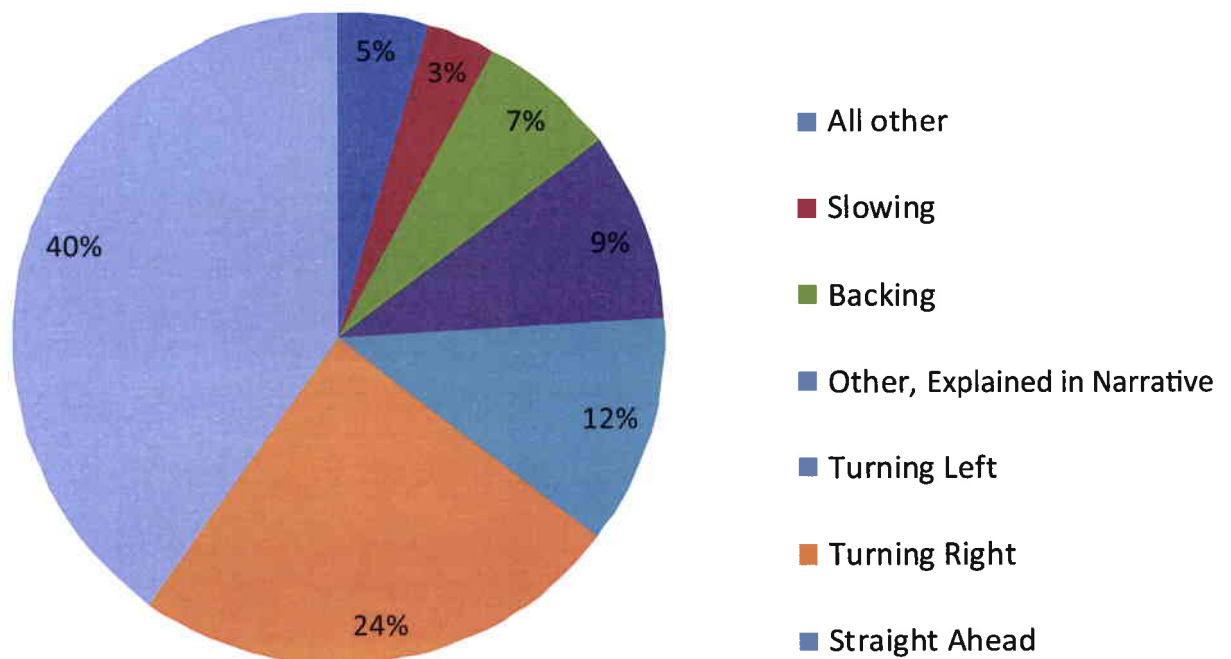

Often many factors play a role in the cause of a pedestrian or bicycle crash. A crash report attempts to capture that cause in an analyzable way. These causes can vary by mode, but in Collier County the most frequently reported crash cause is the motor vehicle *Failure to Yield the Right-of-Way*. There were 144 (37%) reported instances of this cause for both pedestrian and bicycle crashes. Failure to yield can be on the part of the driver or the pedestrian or the bicyclist and when included in a crash report it is based on whoever was legally supposed to yield the right-of-way. There was a large number of crash reports reviewed that did not specify a cause.

### Vehicle movement

The direction of movement of both participants at the time a crash is noted in a crash report. The chart below shows movement of the first participant or vehicle. The vehicle participant believed to be at fault was moving straight ahead in 40% of crashes, and either turning right or turning left in 33% of crashes.

In the 9 percent of cases the movement was noted in the crash narrative, but not in the report. Reasons noted in the narrative included things like backing into a parking space or crossing a driveway.

### Weather conditions

The weather was noted as clear in the majority of pedestrian or bicycle crashes. This is likely because more people choose to walk or bicycle when the weather is clear.

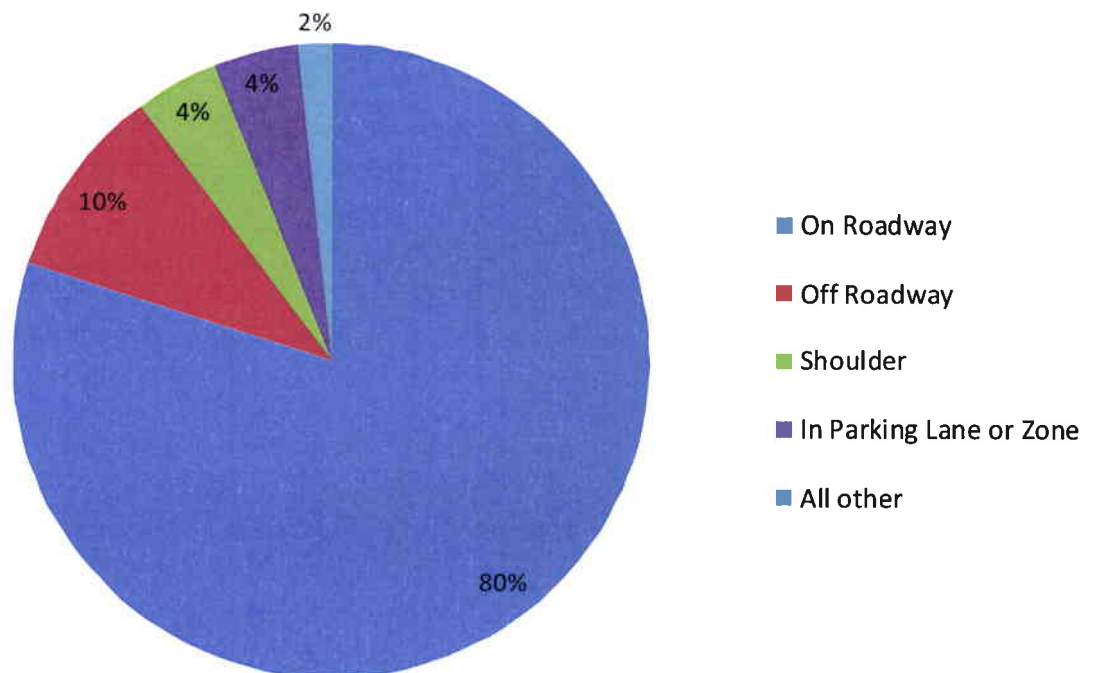

### Lighting

The majority of recorded crashes, regardless of severity, occur in the daylight hours, which makes sense because that is when the majority of people walk or bicycle.

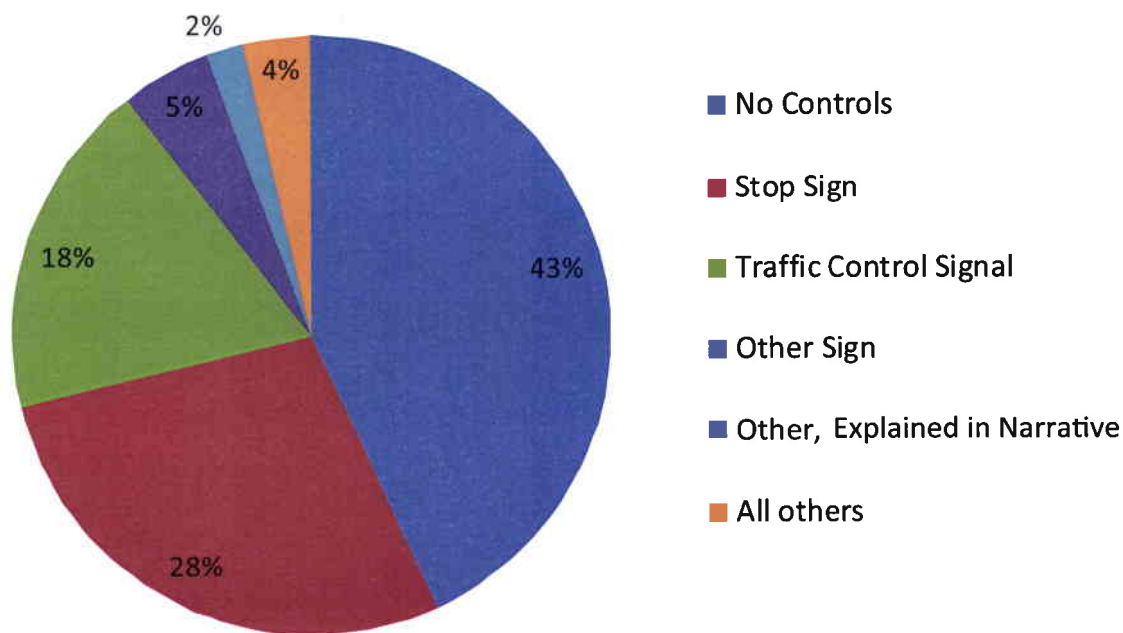

### Location on the roadway

Most pedestrian or bicycle crashes happened on the roadway. For pedestrians, that typically means they were crossing the roadway at either a non-signalized (midblock) location or at a signalized intersection. In a number of cases, no location was noted on the crash report.

### Traffic control

In almost half of the crashes in Collier County, there were no traffic control devices at the scene of the crash. This can mean a variety of things, including crossing at mid-block or away from an intersection. In 28% of the cases, there was a stop sign at the crash location and in 18% there was a traffic signal.

### Relation to intersection

One way to begin to understand where a crash problem may be occurring is to look at where the crash occurred relative to an intersection. This chart shows that in Collier County one third of the pedestrian or bicycle crashes occurred at an intersection, and about the same percentage occurred away from the intersection. Intersection related is typically within the influence area of an intersection, such as where right or left turn lanes are striped. Driveways and alleys are frequently the location of crashes where the driver didn't see a pedestrian or cyclist approaching from the right as they were attempting to turn right onto a major roadway.

## Chapter 3 – Unreported Crashes and Near Misses

Some pedestrian and bicycle crashes are never reported. For the purposes of this Study, unreported crashes are defined as pedestrian and bicycle crashes caused by conflicts with motorists or with other pedestrians or bicyclists that do not get documented in a crash report filed by law enforcement. Other types of crashes, such as a pedestrian who trips and falls or a bicyclist who falls due to equipment failure, are also unreported incidents, but single-user incidents of this nature are not the type of unreported crash that is the focus of this Study.

By virtue of the definition, unreported crash statistics are not easily quantified. The Federal Highway Administration estimates that about 75% of the hospitalized victims of pedestrian and bicyclist crashes with motor vehicles are identified with an official motor vehicle crash report<sup>3</sup>. So nationally, there are roughly 25% of pedestrian and bicyclist crashes with motor vehicles resulting in hospitalization that are not reported through the standard means of a crash report.

Adding to the unreported crash statistic of hospitalized victims are those victims of crashes that result in a medical office visit rather than a hospital visit and go unreported<sup>4</sup>. This under-reporting of crash statistics for victims requiring medical attention is compounded by the fact that there is no documentation of the pedestrian or bicyclist who experiences a “near miss,” where a motorist’s or other pedestrian’s or bicyclist’s action nearly misses or forces the pedestrian or bicyclist from his or her path causing a crash, albeit without direct physical contact.

### Survey Methodology

While documented crash data of reported pedestrian or bicyclist encounters with motorists is an accepted source and means to analyze safety trends, the other “untold stories” of incidents and near misses that go unreported were deemed an important element to address in this Safety Study. To address this issue, a public survey was designed to gather information on pedestrian and bicyclist safety-related experiences to supplement the Crash Data analysis performed for this Study. The objective of the Safety Survey was to acquire information from the walking and bicycling public to begin to understand the experiences, circumstances, and reporting practices for pedestrians and bicyclists who have conflict with motorists or other pedestrians or bicyclists in Collier County. This survey constitutes the first survey administered by the Collier MPO to capture public perceptions of safety and document safety-related experiences, particularly unreported incidents and near misses, of the walking and bicycling public.

---

<sup>3</sup> “The Pedestrian and Bicyclist Highway Safety Problem as it Relates to the Hispanic Population in the United States” (DTFH61-03-P-00324), Federal Highway Administration, Center for Applied Research, Inc., December 2004.

<sup>4</sup> Hospital and police records for 2,504 bicyclists who had been treated at San Francisco General Hospital revealed that nearly half of bicyclist injuries were the result of crashes that did not involve a car. These injuries often did not result in police reports. If injured cyclists do not go to emergency rooms, the crashes causing those injuries are also not documented. Source: “How Safe is Cycling? It’s Hard to Say,” Gina Kolata, *The New York Times*, October 22, 2013, The New York Times Company.

The survey was prepared with questions designed for members of the public who identify themselves as a pedestrian or bicyclist. Most important was to capture those who identify themselves as having been involved in a collision or been forced from their path while walking or bicycling within the past 5 years, which is consistent with the timeframe for which documented crash data was collected and analyzed.

The National Highway Traffic Safety Administration and the Bureau of Transportation Statistics 2002 National Survey of Bicyclist and Pedestrian Attitudes and Behavior<sup>5</sup> was used as an example and adapted to the context of the Collier MPO's survey objectives to develop this survey's questions and method.

National trends and findings related to unreported pedestrian and bicyclist crashes were reviewed. According to the Federal Highway Safety Administration, some of the crashes not reported to the police are because they occur on private property, such as parking lots or driveways, and a police report is not required. Some crashes are not reported because the injured pedestrian or bicyclist chooses not to call the police. The survey was designed to zero in on the eventuality of these types of situations in Collier County.

## Survey Execution

The proposed survey questions and administration methods were presented to the Collier MPO Pathways Advisory Committee (PAC) at its September 27, 2013 Workshop. Survey questions allowed for non-prescribed answers (i.e. multiple choices include an "other" selection to fill-in answers). See Appendix B for example survey forms.

The survey was made available by three different methods to reach as many people as possible within a limited time period. The survey was administered in English and in Spanish and was open to all age groups. The three methods are described further on the next page.

Figure 3: Paper survey being administered at local events

Figure 4: Placards in Collier area transit buses in Spanish and English

<sup>5</sup> "National Survey of Bicyclist and Pedestrian Attitudes and Behavior, Volume III: Methods Report" (DOT HS 810 973), U.S. Department of Transportation National Highway Traffic Safety Administration and the Bureau of Transportation Statistics, August 2008.

*Online survey.* The online survey was available online from October 23, 2013 to December 5, 2013. The online survey was publicized through multiple email announcements to Collier MPO contacts, the Collier MPO website, communications by various interest groups (such as the Naples Pathways Coalition and Collier County Healthy Community Coalition), and placards inside all Collier Area Transit buses featuring a QR Code for convenient access using a device with a QR reader.

**Figure 5: The MPO website including a link to the survey**

*Survey forms at public facilities.* Hard copies of the survey forms were made available at the Collier Area Transit Transfer Station and public libraries from October 23, 2013 to December 5, 2013. Availability at these locations was publicized through placards inside every Collier Area Transit bus. Hard copies were also made available at the Naples Pathways Coalition Turkey Ride on December 1st, 2013.

*Field surveys.* The geographic criteria for determining locations of field surveys and intercept surveys was according to high concentrations of documented pedestrian and bicycle crashes within the past five years in the County. Four locations were identified for field surveys: Golden Gate, Immokalee, Naples Manor and the Collier County Government Complex.

Two (2) event-based field surveys were conducted by Spanish and English speaking consultant team members on October 24, 2013 at the Immokalee Sheriff's Night Out event and the Golden Gate Sheriff's Night Out event, both sponsored by the Collier County Sheriff's Office.

Two (2) location-based intercept surveys were conducted by Spanish and English speaking consultant team members on November 6, 2013 at the Collier Area Transit Government Center Station and the Naples Manor neighborhood.

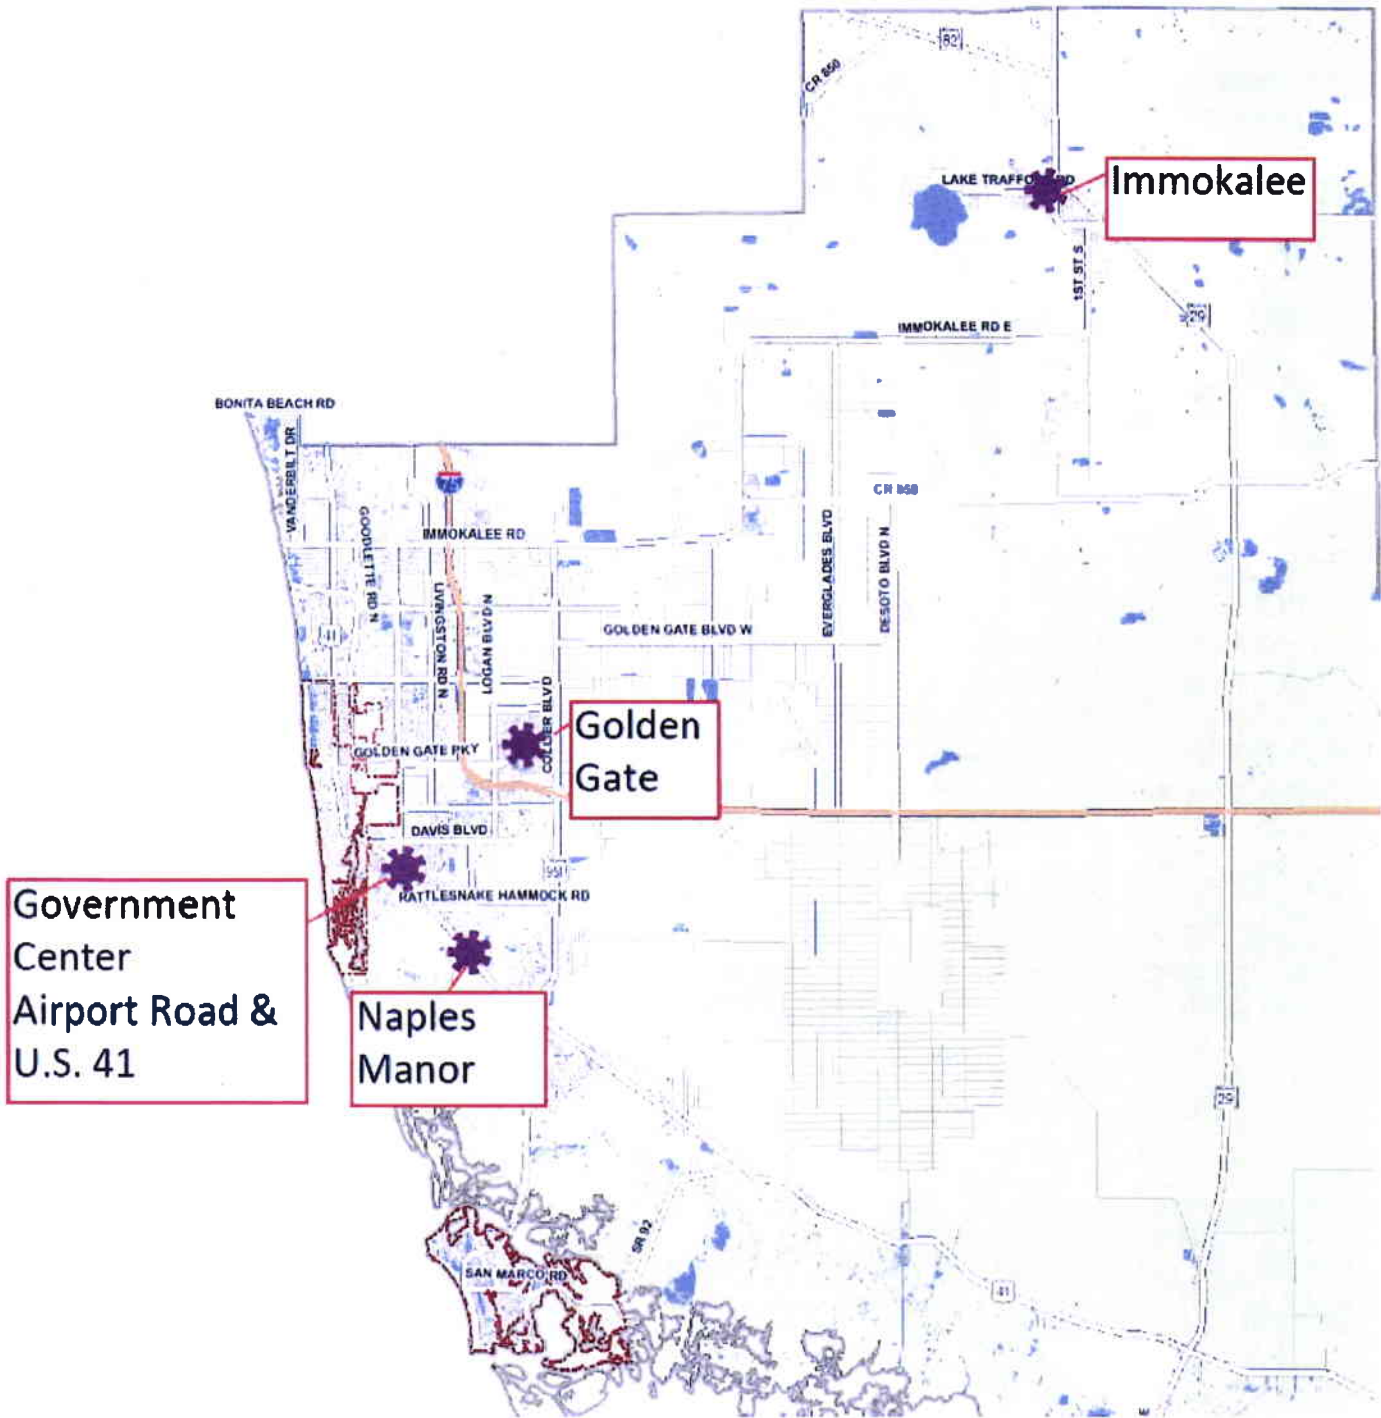

**Figure 6: Surveys conducted at Golden Gate City Sheriff's Night Out**

**Figure 7: Surveys conducted at Immokalee Crestview Apartments**

**Figure 8: Field survey and Intercept survey locations**

## Survey Results

A total of 478 surveys were collected. The Florida Bureau of Economic and Business Research estimates the 2012 population for all of Collier County is 329,849. This sample group is a fraction of one percent of the total population, so should not be considered statistically representative for the County population, however it provides a view into the pedestrian and bicyclist experience from the different perspectives of those 478 people who participated online, at events, and in public facilities around the County. Participation is summarized in the following table:

Participation Method	Number of Participants	Percent of Total
Online	362	75.7%
Public facilities	20	4.2%
Immokalee event	63	13.2%
Golden Gate event	26	5.4%
Government Center (CAT Station) intercepts	6	1.3%
Naples Manor intercepts	1	0.2%
Total	478	100%

**Table 2: Survey participation Results**

Nine percent of the surveys were returned or taken online in Spanish. For comparison to County conditions, the America Community Survey (2009-2011) available through the U.S. Census, which indicates 16.6% of the Collier County population of age 5 years or older speak English less than “very well.”

The survey results reveal the following findings of those who participated:

47% of participants indicated they had been in a collision or were forced from their path while bicycling or walking in the past 5 years.

Of those who indicated they experienced collisions or were forced from their path, 74% indicated it was while biking and 26% were walking.

The most common factor contributing to the incident was reported as a motorist, indicated by 74% of those who experienced an incident while biking or walking. The second most common factor contributing to the incident was a bicyclist, indicated by 17% of those who experienced incidents while bicycling or walking.

Of those who responded about their collision or being forced from their path, 86% indicated the incident was not reported to police.

62% of participants responded that they feel threatened for personal safety during walking or bicycling trips.

The greatest cause for feeling threatened was due to motorists, indicated by 85% of those who responded as feeling threatened while walking or bicycling.

For full survey results, see Appendix B.

## Chapter 4 - Safety Project Evaluation Form and the development of the supporting crash maps

Funding for pathways projects is typically limited. Safety has been identified as an important evaluation criteria in identifying projects for this funding. The *Collier Pedestrian and Bicycle Safety Project Evaluation Form*, included on page 20, and the supporting maps, were developed to help them identify projects.

The *Project Evaluation Form* includes specific criteria by which the Pathways Advisory Committee and MPO can evaluate projects from a safety perspective. There are two primary evaluation criteria: location of safety issues and the evaluation of the proposed project's effect on the safety issues of the location or corridor.

To assist with the identification of the locations of high crash areas a methodology was developed. This methodology identifies both crash specific 'hot spots' and longer corridors. Maps were created to visually represent the results of the methodology. These maps, depicting clusters and crash corridors are included on pages 21 and 24. As a supplement, the corridors are included in a list on pages 22 and 23.

The steps to identify the high crash clusters and corridors for use with the *Safety Project Evaluation Form* are described below. Additional technical information on the methodology is include in Appendix A.

1. Develop crash clusters by identifying a 'buffer' distance around each crash point that will allow for the data to group into clusters.

2. Categorize into volume levels: low volume (3 or less crashes), medium volume (4-10 crashes) and high volume (more than 10 crashes). Low volume crashes were excluded from further analysis, resulting in the identification of 40 crash clusters.

3. Sort clusters by severity. Of the remaining 40 clusters, the total number of fatal and

incapacitating crashes was calculated for each cluster. This total was also calculated as a percent of total crashes for each cluster. Severity was categorized as Severe (>25% Severe), Moderately Severe (1-25% Severe) and Not Severe (0%).

4. Identify Crash Corridors.

Crash corridors identify a larger road network than the crash clusters. Crash corridors have a crash density higher than the major roads but lower than the crash clusters.

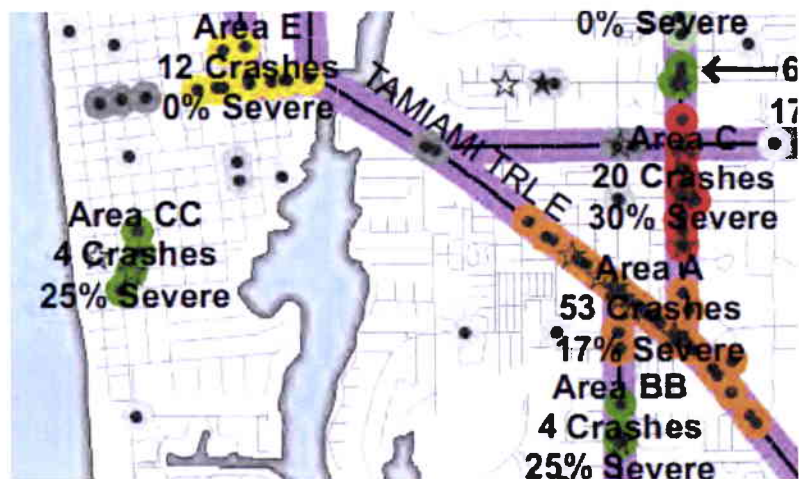

Figure 9: An example of crash clusters and crash corridors

## Evaluation of pathways projects using the Evaluation Form and the Maps

The maps developed as part of the analysis are to be used in conjunction with the *Collier Pedestrian and Bicycle Safety Project Evaluation Form*. By applying the above criteria, it is possible to illustrate areas in Collier County where, for a variety of reasons, significant numbers of pedestrian and bicycle crashes have occurred. The maps are supplemented by a ranked list of locations. Potentially, using the form and the maps, the highest number of points or priority would be given to the projects that fall within a high crash cluster or corridor.

Figure 10: Pedestrian and Bicycle Safety Project Evaluation Form

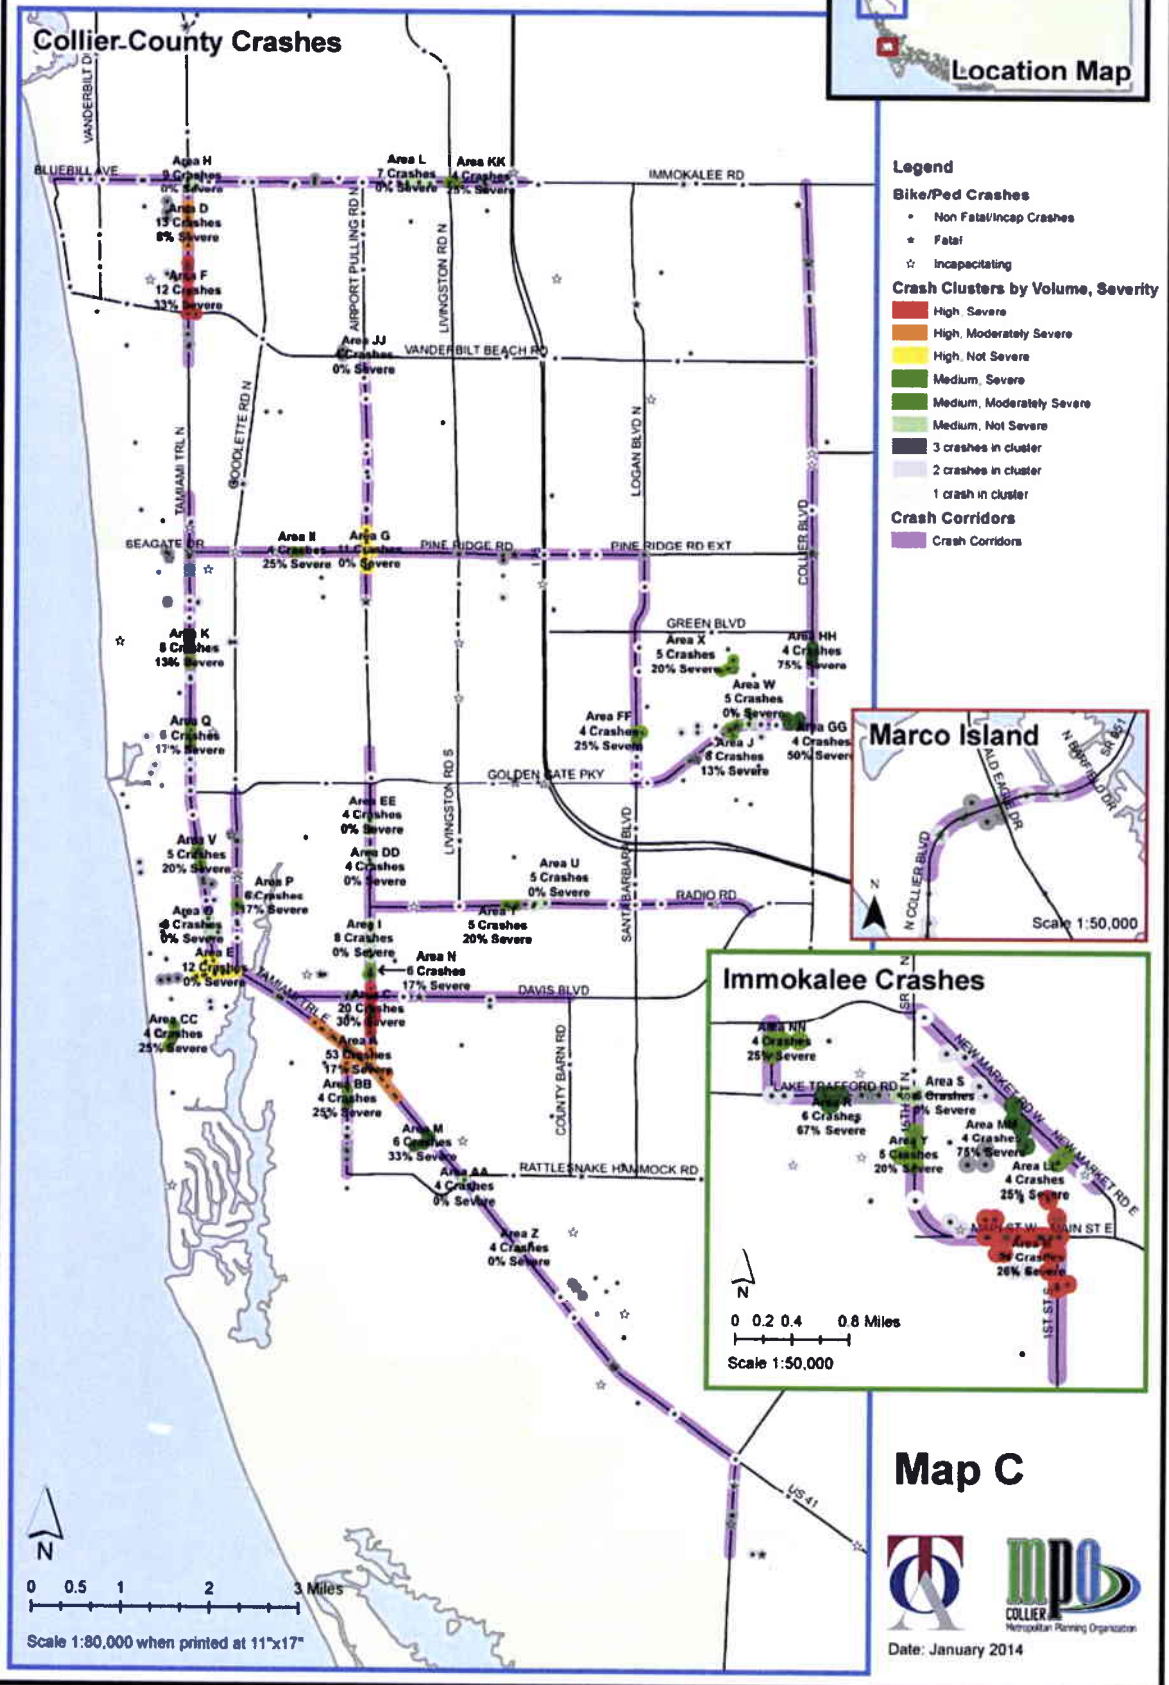

## Pedestrian and Bicycle Safety Project Evaluation Safety Form

Safety was ranked as the number one project evaluation criteria by the PAC in the *Comprehensive Pathways Plan*. The purpose of this matrix is to assist the Pathways Committee with evaluating projects from a safety perspective. A maximum of 10 points may be assigned for questions 1 and 2. Questions 3 – 5 are additional criteria that help further clarify the impacts of the presented project.

Safety Evaluation Criteria		
<b>Goal</b>	To improve safety by designing/retrofitting roadways to include features such as wider sidewalks, dedicated bicycle facilities, medians, and pedestrian streetscape features, including trees where appropriate.	
Primary Criteria – Each worth up to 5 points		Points
1	Extent of Bicycle/Pedestrian Safety Issues: <ul style="list-style-type: none"> <li>• 5 Points: The project is within a designated high-crash corridor/area. (See CRASH CLUSTERS &amp; CRASH CORRIDORS Map)</li> <li>• 3 Points: The project is along an arterial roadway or multilane collector street. (See ROADWAY TYPE Map)</li> <li>• 1 point: The project is along a 2-lane collector or local street. (See ROADWAY TYPE Map)</li> </ul>	
Describe safety issues in the project area (attach map/drawing if available)		
2	Extent to which the project mitigates safety issues: <ul style="list-style-type: none"> <li>• 5 points: The project specifically mitigates a documented crash issue.</li> <li>• 3 Points: The project implements best practices related to countywide bicycle/pedestrian crash patterns.</li> <li>• 1 Point: The project provides for general improvements to bicycle/pedestrian mobility.</li> </ul>	
Describe how the project mitigates safety issues (attach safety study if available)		
Additional considerations - these factors are each worth 1 point		
3	Location identified in previous study or safety audit? (please name study)	
4	Does project connect to or complete an existing bicycle or pedestrian facilities?	
5	Project can be implemented as part of a larger capital project	
<b>TOTAL POINTS</b>		
Project location details	Site inspection (identify presence or absence of sidewalks, crosswalks, etc. or bicycle facilities, traffic speed/volume, bicyclists or pedestrians observed) – include photographs or aerial

## Chapter 5 - Conclusions

Collier MPO has a long history of incorporating pedestrian and bicycle safety into its transportation decisions. Collier County has experienced tremendous growth over the past thirty years and with so much growth, has developed a roadway system designed to move automobiles longer distances at relatively high speeds. In areas where this roadway network is shared by road users who depend on walking and/or bicycling to meet their basic mobility needs, the propensity for crashes and tragedy increases. This project provides an in-depth, county-wide analysis of the County's bike and pedestrian crash history, takes an innovative approach to understanding the unreported crash problem, and offers evaluation tools to help prioritize future multimodal mobility projects. Summary conclusions related to each of these facets of the project are provided below:

**Figure 14: Bicycling can make that first and last mile more convenient**

### Crash Data Analysis

The charts in Chapter 1 show the results of the analysis of various aspects of data provided by crash reports completed by law enforcement. The most basic conclusion of these is that while Collier County has fewer pedestrian crashes per-capita than many other Florida counties, it still has more pedestrian fatalities per capita than occur nationally. Collier County also has more bicycle crashes per capita than average for Florida and more bicycle fatalities per capita than the nation. Other conclusions related to pedestrian and bicycle crashes include the following:

- Pedestrian and bicycle crashes tend to occur with greater frequency during the winter months consistent with the County's overall seasonal variation in population and traffic.
- Proportionally more pedestrian and bicycle crashes occur during the day compared with other parts of the State. Enhanced roadway lighting is a "go-to" countermeasure for bicycle and pedestrian crashes in most areas, but may not be as effective in Collier County.
- Crashes appear to be evenly spread out across age brackets; however, male bicyclists and pedestrians are much more likely than females to be involved in a crash. Educating adult pedestrians and cyclists about safer practices is more challenging than educating children and will require a combination of mass media, new media, and grass-roots educational efforts along with targeted enforcement activity in high-crash areas.
- More than 85 percent of the pedestrian and bicycle crashes occur in the more urban coastal parts of the County and in the town of Immokalee. This can help to focus engineering, enforcement, and education initiatives.
- In addition to being concentrated in built-up, urban areas, crashes are also concentrated along the County's major roadway network. This is common throughout Florida and provides both opportunity and challenge. The opportunity arises from the fact that a relatively large number of crashes can be addressed by developing countermeasures for a relatively small component of the County's overall roadway system. The challenge is that the function and purpose of these roadways to carry high volume

of traffic at relatively high speeds limits the set of design tools that can reasonably be brought to bear on the issue.

### Unreported Crashes and Near Misses—Crash Survey

It has been found that a significant number of pedestrian and bicycle crashes are not reported to law enforcement. This is common in events where injuries that require emergency medical services are not sustained and damage to property does not warrant the motor vehicle driver's insurance to be invoked. Under-reporting can also occur in the event of un-documented aliens seeking to avoid contact with authorities.

To better understand the circumstances of these unreported crashes, this project included the development and administration of a survey that was administered on-line, in-person, and using a mail-back form. The survey was published in English and Spanish and was promoted using advertisements on CAT buses. While the 478 survey participants did not allow for the survey findings to be statistically significant, the following themes nonetheless were apparent:

**Figure 15: Gathering survey feedback in Golden Gate City**

- A majority of pedestrians and bicyclists felt threatened by motorists, debris, or facility over-crowding.
- Almost half of the respondents had been in a collision or had been forced from their path, and most of them had not reported the incident to law enforcement.
- The reasons for not reporting the incident varied and included reasons ranging from a lack of injury to a preference not to include law enforcement feeling that the incident would not be relevant to law enforcement.

Future opportunities for this type of activity include expanding the audience by identifying additional local events and gathering additional on-line feedback. A larger sample size might allow for the identification of locations that could be 'spot-treated' in response to a particular challenge, or common themes to direct future education campaigns for motorists, bicyclists, pedestrians or law enforcement personnel.

### Project Safety Evaluation Form and High Crash Cluster and Corridor Analysis

The final task of this project was to develop guidance for the evaluation of bicycle and pedestrian facility projects from a safety perspective. Safety is one of the goals identified in the MPO's adopted *Comprehensive Pathways Plan*. The Safety Evaluation Form and maps developed for this project are tools that can be used by the PAC, the MPO and help MPO jurisdictions in the development of future projects to help target the most unsafe, highest crash locations in the County. The recommended methodology relies on crash severity and frequency to identify areas that have consistently been challenging for walkers and bicyclists. Consistent with the goals of the *Comprehensive Pathways Plan*, if other (non-safety) criteria are equal, projects that are located within these identified high-crash areas and include elements that are likely to address the subject-

areas' crash issues should be prioritized above projects that do not address known safety issues.

### Potential Next Steps

The tasks incorporated in this study have resulted in both a better understanding of the county-wide crash trends and in the identification of opportunities for additional study and investment. Work is currently being done in Immokalee based on past Roadway Safety Audits and with future Walkability Studies planned. The MPO will continue to fund projects that make the county safer for walking and bicycling. In addition to these ongoing/planned activities potential next steps include:

- Development of a *Pedestrian/Bicycle Safety Action Plan* that identifies and develops consensus for engineering, educational, and enforcement strategies to further reduce pedestrian and bicycle crashes
- Application of FHWA's pedestrian and bicycle safety audit methodologies to high crash segments/areas in order to identify specific actionable engineering countermeasures
- Support the continuing education for law enforcement personnel to encourage enforcement of egregious bicycle and pedestrian safety issues (e.g. riding against traffic with no head light, crossing against a traffic signal or crossing mid-block in a manner that impedes traffic, or failure to yield to pedestrians or cyclists as required for motor vehicle drivers).
- Encourage the continuing education for engineering personnel related to modern best design practices for bicycle and pedestrian safety.

**Appendix A: Crash Cluster and Corridor Identification – a technical methodology for locating high crash areas**

## Crash Cluster and Corridor Identification – a technical methodology for locating high crash areas

Crashes were analyzed using GIS to organize them into a prioritized list of concentrated crash areas. Generally speaking, the Consultant developed an approach to represent individual crash data point locations as clusters to better visually represent the data. The approach solved the data integrity problem that can occur when many points located at the same intersection are on top of each other and look like one data point.

The steps to identify the high crash corridors for use with the Safety Project Evaluation form are as follows.

1. Develop crash clusters.
2. Categorize into volume levels.
3. Sort clusters by severity.
4. Identify Crash Corridors.

### Detailed Methodology

Crash data was compiled into a GIS data structure called a shapefile. Crashes were located within the shapefile by the cross streets identified in the police report. Of the 1067 crashes involving bicycle and pedestrians from 2008-2012, 249 were unable to be mapped and 49 were located in parking lots. This left 771 crashes (72% of all reported crashes) to be analyzed with GIS in this report.

In GIS, each data point was buffered by a specific distance to identify clusters of high crash areas. This distance was set at 350 feet, which comfortably accommodates the functional size of a major intersection. This distance identified 363 clusters containing 1 to 55 crashes.

The number of crashes per cluster were identified and labeled. Since the 771 points were only generalized down to 363 clusters, additional clusters that didn't contain many crashes were excluded in order to focus on the higher volume crash clusters. Crash clusters were categorized into low volume (3 or less crashes), medium volume (4-10 crashes) and high volume (more than 10 crashes). Low volume crashes were excluded from further analysis, identifying 40 crash clusters.

Of the remaining 40 clusters, the total number of fatal and incapacitating crashes were calculated for each cluster and added to the attribute data. This total was also calculated as a percent of total crashes for each cluster. Severity was categorized as Severe (>25% Severe), Moderately Severe (1-25% Severe) and Not Severe (0%). This data was added to the attribute table.

In order to identify the locations with the greatest safety concerns, both the volume and severity of crashes were examined. A high volume of crashes can be an indicator of a problem with a particular area.

Frequently, the difference between a fatal injury and a survivable injury is situation specific; vehicle speed, driver reaction time, and timing all affect the severity of a crash. For this reason, clusters were ranked primarily by volume and then by severity to create the following six clusters: (1) High Volume, Severe; (2) High Volume, Moderately Severe; (3) High Volume, Not Severe; (4) Medium Volume, Severe; (5) Medium Volume, Moderately severe; (6) Medium Volume, Not Severe. Crash areas were color coded based on the six schemes above and labeled with a unique identifier (A, B, C, etc.), the number of crashes and % severe.

To summarize the data, the total number of crashes within all crash clusters was calculated and expressed as a percent of total crashes. The total length of the road network within the crash clusters was calculated and expressed as a percent of the major road network. ***In Collier County, the crash clusters comprise 15.2 miles (3.2%) of the major road network. There are 327 crashes (42%) within the crash cluster road network. Crash clusters have an overall density of 21.5 crashes/mile (or 1 crash per 0.0465 miles, or 1 crash per 245 feet).***

### Identifying Crash Corridors

While the cluster analysis identified numerous ‘hot spots’ throughout the county, crash corridors were also identified. Crash corridors have a crash density higher than the major roads but lower than the crash clusters. Crash clusters were found to have a crash density of 21.5 crashes per mile. The average crash density on major roads is 1.2 crashes per mile. In order to identify the crash corridors, the crash clusters identified above were overlaid with the major road network and crash point data.

Large road sections (generally between major intersections) were added to connect spatially close clusters or numerous crashes between major roads that aren’t close enough to create clusters. Road segments were deleted if their added segmentation length fell below a target of 10 crashes per mile (midpoint between the cluster density and the main road network density). The resulting network was called crash corridors.

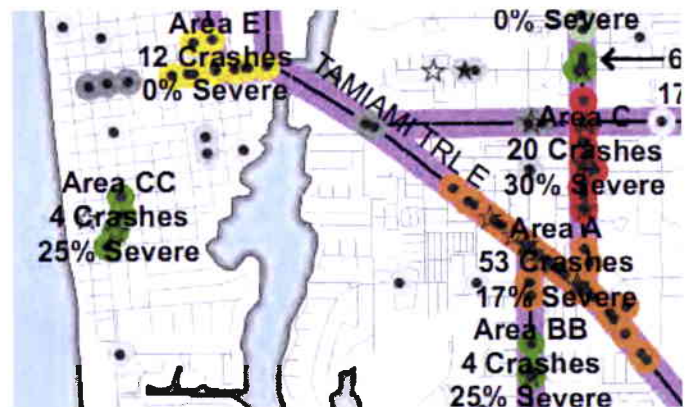

Figure 16: An example of the crash clusters and corridors

The total number of crashes within 350 feet of the crash corridor network was selected and expressed as a percent of total crashes. The total fatalities and incapacitating injuries in the crash corridors was also calculated. ***The total length of crash corridor network was calculated and expressed as a percent of major roads network (63.1 miles, 13.5% of major roads). There were 442 crashes (57%) within the crash corridor network. Crash corridors have an overall density of 7.0 crashes/mile (or 1 crash per 0.1423 miles, or 1 crash per 754 feet).***

## **Appendix B: Survey Questions**

El Collier MPO busca sus opiniones para tener mejor entendimiento de experiencias relacionadas con su seguridad cuando caminando y andando en bicicleta.

**1** En los últimos 5 años, has tenido alguna colisión o una situación en la que has tenido que abandonar su camino cuando caminando o andando en bicicleta?

SI  No

En Bicicleta o  Caminando

En caso afirmativo Ir a Pregunta 2

En caso negativo ve a Pregunta 6 abajo

**2** Donde ocurrió el incidente?

Nombre de calle \_\_\_\_\_

Intersección mas cercana \_\_\_\_\_

n/a

**3** Cuáles fueron los motivos del accidente o las causas para abandonar su camino? (marque todas las que correspondan)

automobilista  perro / otro animal  peatón  n/a

ciclista  objetos como un árbol o una señal  yo mismo  otro \_\_\_\_\_

**4** Fueron los incidentes reportados con la policía?

sí  no

**5** Si no fueron reportados, cuáles fueron las razones por las que los incidentes no fueron reportados con la policía? (marque todas las que correspondan)

locación (propiedad privada)  lesión causada por amigo o miembro de la familia  preferir no involucrar a la policía  otro \_\_\_\_\_

n/a

---

**6** Generalmente, en donde caminas o manejas la bicicleta? (marque todas las que correspondan)

acera  hombro pavimentado de la carretera  ruta de multiuso para caminar y bicicleta

carril bici/ ciclo vía (en la carretera)  carretera pavimentada (sin hombro)  otro \_\_\_\_\_

**7** Cada cuánto caminas o manejas la bicicleta?

amenudo (2 -7 días por semana)  aveces (1 - 4 días por mes)  casi nunca (1 - 11 días por año)

**8** Cuál es su razón principal para caminar o manejar la bicicleta? (marque todas las que correspondan)

trabajo o escuela  mandados (tienda, correo)  ejercicio

placer  llegar a la parada de buses  otro \_\_\_\_\_

**9** Cuáles son las razones principales por las que no quieres caminar o manejar la bicicleta? (marque todas las que correspondan)

no me siento seguro  las aceras o carril bici/ ciclo vía esta muy llenas de gente  Los instalaciones estan en mal estado - Locación? \_\_\_\_\_

condiciones climáticas  caminando toma demasiado para llegar a mi destino a tiempo  La falta de instalaciones - Locación? \_\_\_\_\_

n/a  otro \_\_\_\_\_

**10** Cuando caminas o manejas la bicicleta, te sientes amenazado o temor por tu seguridad personal?

sí  no

**11** Si resulta así, te sentiste amenazado debido a: (marque todas las que correspondan)

automobilista  perro/ otros animales  camino desnivelado  otro \_\_\_\_\_

riesgo de un crimen  exceso de trafico de bicicletas y peatones  n/a

**12** Si un automobilista fue la razón por sentirse amenazado, fue debido a: (marque todas las que correspondan)

me cortó  manejó demasiado cerca de mí  casi me pegó  me tocó la bocina / me pitó

automobilista manejando demasiado rápido  automobilista entró en la Intersección sin ver  simplemente la presencia de automobilistas  n/a

**13** Cuáles cambios te gustaría ver en la comunidad? (marque todas las que correspondan)

más pasos de peatones  más aceras  más carril bici/ ciclo vía  más señales para peatones o bicicletas

más luces en la carretera  más caminos/rutas de multiuso para caminar y bicicleta  aceras más anchas  no permitir bicicletas en las aceras

más luces en caminos/rutas  otro \_\_\_\_\_

	<i>answered question</i>	<b>154</b>
	<i>skipped question</i>	<b>236</b>

Number	Response Date	Other (please specify)
1	Dec 3, 2013 2:14 AM	Just a very close call and swerved off road
2	Dec 2, 2013 5:06 PM	Didn't think to call until too late
3	Dec 2, 2013 12:32 PM	We weren't badly injured
4	Dec 2, 2013 12:07 PM	Nothing would be done. As stated by the police.
5	Nov 30, 2013 8:58 PM	I was forced off road, while in my bike lane by a car not paying attention I stopped the motorist and told her that unless she turned around and went home I would place her under arrest. She missed me by less than one inch. Had she hit me, she would have killed me.
6	Nov 30, 2013 6:04 PM	
7	Nov 30, 2013 3:03 PM	I was not injured. I did not get the driver's license plate and the driver fled the scene.
8	Nov 30, 2013 2:32 PM	No injury
9	Nov 30, 2013 12:29 PM	Almost struck by car as I had the right of way through green light
10	Nov 30, 2013 12:16 PM	Police never do anything when reported / waste of time
11	Nov 30, 2013 4:26 AM	Didn't think it would result in anything beneficial
12	Nov 30, 2013 3:59 AM	Forced off road as car passed
13	Nov 30, 2013 3:34 AM	Being forced from the bike path isn't a criminal act
14	Nov 30, 2013 1:21 AM	No collision or injury
15	Nov 30, 2013 12:17 AM	No contact, damage or injury
16	Nov 29, 2013 11:20 PM	It was Reported
17	Nov 29, 2013 11:16 PM	Due to driver's age, I suspect depth perception was the issue.
18	Nov 29, 2013 11:07 PM	no one hurt
19	Nov 29, 2013 10:59 PM	near accident
20	Nov 29, 2013 10:49 PM	fort myers would not file a report even after calling and speaking to the officer in charge
21	Nov 29, 2013 10:39 PM	No injury
22	Nov 29, 2013 10:30 PM	No injuries - only inattentive motorist
23	Nov 29, 2013 10:29 PM	was reported , police at the scene with emergency veh. How do you report an idiot on a cell phone pulling over into the bike lane right in front of you and stopping?
24	Nov 29, 2013 10:25 PM	
25	Nov 29, 2013 1:04 PM	Police were called and came, but I don't think a report was made. Driver of vehicle paid for repair and there was no serious injury.
26	Nov 27, 2013 10:43 PM	Bicyclist was on the sidewalk.
27	Nov 27, 2013 6:15 PM	Police were unconcerned, code enforcement was responsible
28	Nov 27, 2013 12:40 PM	Scary but no harm done
29	Nov 27, 2013 11:40 AM	Rude driver...no injuries.
30	Nov 26, 2013 11:50 PM	no injury - only a near miss
31	Nov 26, 2013 12:30 AM	I'd be calling to complain about motorists every day. What's the point?
32	Nov 25, 2013 11:19 PM	No body hurt
33	Nov 25, 2013 11:36 AM	Was a near miss, not an accident.
34	Nov 25, 2013 3:10 AM	No one was hurt, jst frightened
35	Nov 25, 2013 2:05 AM	No injury occurred.
36	Nov 25, 2013 1:54 AM	My husband and son were so thankful that he was ok. They exchanged info with the driver.
37	Nov 24, 2013 5:22 PM	I, on the other hand, would have reported that incident, for sure.
38	Nov 24, 2013 5:06 PM	no contact, just a narrow miss
39	Nov 24, 2013 4:19 PM	no injury or damage, both car and cyclist stopped.
40	Nov 24, 2013 2:30 PM	Motorist just take off and wave sorry even if you fall
41	Nov 24, 2013 1:15 PM	There was no collision could not identify rider time between incidents and police response would have been too long to apprehend the
42	Nov 24, 2013 1:12 PM	motorists
43	Nov 23, 2013 1:51 PM	I was forced from the road but not injured.
44	Nov 23, 2013 12:04 PM	Near miss by red light runner
45	Nov 13, 2013 2:10 PM	no answer provided
46	Nov 11, 2013 3:35 PM	in route to pick up son from school
47	Nov 11, 2013 3:06 PM	Wasn't hurt
48	Nov 7, 2013 3:46 PM	Neighbor on my street, I handled it myself.

- I was going to the park to exercise and I did not have my cell phone with me. Too bad I
- 49 Nov 6, 2013 9:02 PM couldn't even take the number of his plate because everything happened so fast!
- 50 Nov 6, 2013 4:46 PM no injuries, no contact made, just had to quickly move to prevent getting hit by inattentive driver
- 51 Nov 1, 2013 12:35 AM Car moving to fast - did not have necessary info..
- 52 Oct 31, 2013 3:38 PM Forced out of pathway, no injuries, did not consider it an emergency.
- 53 Oct 31, 2013 3:03 PM No injury. Happened too quickly to get information.
- 54 Oct 31, 2013 2:30 PM They drove off and I had to get to work
- 55 Oct 31, 2013 2:22 PM the motorist did not stop
- 56 Oct 31, 2013 1:23 PM Minor damage to my bike, no injury
- 57 Oct 30, 2013 5:57 PM Did not get hurt.
- 58 Oct 30, 2013 5:00 PM No injury-avoided collision
- 59 Oct 30, 2013 4:58 PM motorist did not stop
- 60 Oct 29, 2013 12:19 PM shooked and no phone and not sure what to do.
- 61 Oct 29, 2013 12:31 AM Accident avoided-no harm done
- This happens all of the time - usually an accident driver not looking. If I get hit or feel it is
- 62 Oct 28, 2013 7:48 PM intentional harrassment, I'll call police.
- 63 Oct 28, 2013 5:40 PM What could they do ?
- 64 Oct 28, 2013 4:37 PM No sidewaolk available
- 65 Oct 28, 2013 2:58 AM forced from path and motorist kept going
- 66 Oct 27, 2013 5:22 PM No physical injury
- I reoprnt when I can and have lic number land scape trailer often are hard to see the plate, oncoming vehiles no plate and these days many of the worst drivers obscure their plates
- 67 Oct 26, 2013 7:50 PM with dark or curved covers
- 68 Oct 26, 2013 11:25 AM Motorist drove away
- 69 Oct 25, 2013 8:07 PM Because they would have not did anything

## Collier MPO Pedestrian and Bicycle Safety Study

Do you walk or bicycle mostly on: (Check all that apply)

Answer Options	Response Percent	Response Count
Sidewalk	57.6%	179

6	Nov 27, 2013 6:20 PM	Car going into the bike lane on the opposite side while passing
7	Nov 25, 2013 1:12 PM	Lack of safe facilities for ped/bike/horses and bus stop
8	Nov 25, 2013 12:32 PM	Traffic moves too fast over Smoke House Bridge/drive much faster than the posted speed limit. No enforcement!
9	Nov 24, 2013 5:27 PM	this happens often
10	Nov 24, 2013 2:40 PM	Motorists do not respect bicyclists
11	Nov 24, 2013 2:13 PM	Motorist not observing crosswalks on green lights.
12	Nov 24, 2013 1:16 PM	it's not the motorist's fault that the lanes are too close
13	Oct 31, 2013 4:33 PM	no bike path on street to get to the bike path
14	Oct 31, 2013 2:33 PM	Motorists are VERY unaware of laws and often dont know right of way or even look for you
15	Oct 30, 2013 6:48 PM	not enough bike lanes
16	Oct 30, 2013 6:33 PM	not paying attention, texting or talking on phone
17	Oct 30, 2013 5:48 PM	as evidenced by the way people drive in this county.
18	Oct 29, 2013 12:37 PM	signal for bicycle to cross not realized by motorist at barfield and san marco, marco island
19	Oct 29, 2013 12:42 AM	Motorist commenced left turn into driveway immediately in front of my path - this was at night & my bike was lighted front & rear.
20	Oct 28, 2013 12:21 PM	They don't look to the right when making a right turn even if the pedestrian light is green
21	Oct 28, 2013 3:09 AM	RUNNING STOP SIGNS & CROSSWALKS

Collier MPO Pedestrian and Bicycle Safety Study

What changes would you like to see in your community? (Check all that apply)

Answer Options	Response Percent	Response Count
More crosswalks	11.6%	36
More lights on street	18.6%	58
More lights on paths/trails	13.8%	43
More sidewalks	32.5%	101
More multipurpose bicycle/walking paths	52.1%	162
More bicycle lanes	54.3%	169
Wider sidewalks	22.5%	70
More pedestrian or bicyclist signage	26.7%	83
Don't allow bicycles on sidewalks	9.6%	30
More lights on paths/trails	7.1%	22
Other (please specify)	15.1%	47

Number	Response Date	Other (please specify)
1	Dec 3, 2013 2:44 AM	Dirt trails for running/biking.
2	Dec 2, 2013 1:16 PM	Education on the rules of riding a bike. Too many times I see people going against traffic instead of with traffic.
3	Nov 30, 2013 7:45 PM	Increase motorist awareness; enforce speed limit
4	Nov 30, 2013 1:20 PM	Less government involvement in the issue. Let the private sector take care of bicycle/walking needs if the exist.
5	Nov 30, 2013 1:16 PM	Less government involvement in the issue.
6	Nov 30, 2013 4:29 AM	Wider shoulders
7	Nov 30, 2013 4:05 AM	Don't allow walkers or runners in bike lanes
8	Nov 30, 2013 12:22 AM	Cleaner bike paths
9	Nov 29, 2013 11:12 PM	Enforce existing laws and don't treat cyclists and pedestrians like they belong.
10	Nov 29, 2013 10:56 PM	enforcement of drivers that threaten bicyclist
11	Nov 29, 2013 10:38 PM	Clean bike lanes, wider, with buffer zones
12	Nov 29, 2013 10:11 PM	None
13	Nov 27, 2013 6:20 PM	Better police enforcement of traffic laws.
14	Nov 27, 2013 5:07 PM	Awareness program for motorists stopping before the crosswalk and looking both ways
15	Nov 27, 2013 12:01 PM	bicycle paths in remote areas
16	Nov 27, 2013 11:21 AM	More lights on san marco out to high school and goodland
17	Nov 27, 2013 3:35 AM	Hard law enforcement of motorist NOT STOPPING at redlights or stop signs.
18	Nov 26, 2013 12:38 PM	Motorist awareness
19	Nov 26, 2013 12:39 AM	Please do NOT mix pedestrians and cyclists.
20	Nov 25, 2013 1:12 PM	more multipurpose/recreational paths in rural and semi rural areas - does not have to be concrete
21	Nov 25, 2013 12:32 PM	Insist the police enforce the speed limit. Insist bicyclists stop at cross walks when auto traffic is in crosswalk
22	Nov 25, 2013 2:09 AM	More education of both cyclists and motorists of the law and responsibilities of both.
23	Nov 24, 2013 5:10 PM	bicycle lanes need to be wider.
24	Nov 24, 2013 4:26 PM	More Inforcemeat of crosswalk motorist violations More signs that remind motorists to leave 3' between the car and the bicyclists and remind them to yield when appropriate
25	Nov 24, 2013 2:40 PM	appropriate
26	Nov 24, 2013 2:13 PM	All empty lots should be required to install concrete sidewalks.
27	Nov 24, 2013 1:45 PM	if a bike path is present, signage to say "No Bicycles On Sidewalk"
28	Nov 11, 2013 9:12 PM	n/a
29	Nov 11, 2013 8:47 PM	n/a
30	Nov 11, 2013 8:07 PM	more free landspace
31	Nov 11, 2013 7:58 PM	n/a
32	Nov 11, 2013 3:32 PM	bike education
33	Nov 7, 2013 3:53 PM	We need horse trails, where I am there are several people with horses and no safe place to ride them.
34	Nov 5, 2013 2:25 PM	If paths are shared with pedestrians they must be wide enough for passing safely.
35	Nov 4, 2013 10:26 PM	Wider and more bike lanes and wider lanes dedicated to bikes, too many walkers on shared paths.
36	Nov 4, 2013 1:09 PM	Stricter bicycle law enforcement and education
37	Oct 31, 2013 7:42 PM	more bikers and walkers would help to make a better bike/walker community
38	Oct 31, 2013 2:33 PM	Involvement in community education of ped bicyclists and accountability put on mortorists allow bicycles on sidewalks, but teach people appropriate ways to ride. Bikes should not ride AGAINST TRAFFIC EVER and people doing so SHOULD BE PUNISHED for doing so. Also, walkers and runners should be going against traffic, not with.
39	Oct 31, 2013 12:18 PM	no bicycles lanes on the major roads, Pineridge and rt 75 has obstructed view of bike lane if a large vehicle is in line with the entrance ramp
40	Oct 30, 2013 6:33 PM	We need bicycle trails or paths in our communities that are not part of the roadways.
41	Oct 30, 2013 5:48 PM	Pedestrian crosswalks in Pelican Bay are obnoxiously rough for bicycles - the cobblestones. Assume this was intentional.
42	Oct 28, 2013 7:52 PM	Campaign to encourage motorists to stop before the crosswalks and keep pedestrians from wearing music earplugs
43	Oct 28, 2013 4:38 PM	earplugs
44	Oct 28, 2013 3:09 AM	More enforcement of stop lines, stop signs & residential speed limits during season In areas where sidewalk is the only alternative, make the sidewalk into a PAVED wide pathway; asphalt easier on the knees for peds & smoother for cyclists
45	Oct 28, 2013 12:53 AM	the knees for peds & smoother for cyclists
46	Oct 26, 2013 8:03 PM	better driver education and enforcement
47	Oct 25, 2013 8:43 PM	Kepp the streets clean

Answer Options	Response Count
	74
answered question	74
skipped question	316

Number	Response Date	Response Text
1	Dec 3, 2013 2:44 AM	I would love to see dirt trails. Running on sidewalks is hard on the knees, and dirt paths are 100% healthier. The few dirt paths I could find in state forests are either too short, runners aren't allowed, or I run the risk of being mauled by an alligator, panther or bear. None of these are appealing. Dirt trails longer than 2 miles would be WONDERFUL!!
2	Dec 2, 2013 11:21 PM	In the areas with wider sidewalks, there is more walking and biking, which is good as there are no bike lanes. They are safer because cars can't get that close to cause damage....usually.
3	Dec 2, 2013 5:11 PM	I run with a stroller and the gross majority of the sidewalks (if in existance) are made to look decorative and it is too difficult to run and push a stroller safely on them.!
4	Dec 2, 2013 12:35 PM	I'm a runner and I actually have more issues with cyclists on the sidewalk than with motorists. Cyclists don't feel safe biking on the road (and I don't blame them) but then they ride on the sidewalk and force me off or I have to stop to let them pass. Especially a concern when I run early morning and its dark if the cyclist doesn't have lights.
5	Nov 30, 2013 9:04 PM	We need more bike/walking trails throughout Collier County
6	Nov 30, 2013 7:45 PM	You can't make it 100% safe but increased motorist awareness of walkers, runners and cyclists would help. Enforcement of speed limit on neighborhood streets would go a long way to making them feel safer.
7	Nov 30, 2013 6:47 PM	As an experienced rider, I find Naples very bicycle friendly. I've not (yet) experienced harassment or threats from motorists, but one has to keep alert and not take chances in traffic, esp. at intersections. Livingston Road from Pine Ridge to Radio Road should have bike path. There is ample room to do so, and it would safely complete the route from Radio Rd to Estero/Ft. Myers. The road is wide enough to contain the bike path on both N and S sides. This area is very heavily traveled, but is a prime route for bicycle riders and would make it a much safer route.
8	Nov 30, 2013 6:14 PM	Need to educate the motorist.
9	Nov 30, 2013 3:50 PM	Thank you for what you do
10	Nov 30, 2013 12:33 PM	Thank you for what you do
11	Nov 30, 2013 12:18 PM	Need more pathways like the Rich King pathway
12	Nov 30, 2013 4:17 AM	Bicycles May Use Full Lane' signs are gaining popularity across the country. When no bike lane is present, would be nice to have these signs.
13	Nov 30, 2013 3:38 AM	I don't like to ride on sidewalks, but there are times during season that I feel I have to for safety's sake
14	Nov 30, 2013 1:27 AM	More education about the health and economic benefits of biking/pedestrian trails might reduce opposition and encourage more government attention to improving biking/walking/running safety and participation in Collier County.
15	Nov 29, 2013 11:34 PM	Collier County is a wonderful place to Cycle, with or without other Riders. The sport of 'Serious Cycling' requires total concentration and Focus while on the Bike( always with a helmet). The element of vehicular traffic is so serious with so many people from all over the world having fun and often rather distracted behind the wheel. The health benefits of exercise and friendship are fantastic. Any efforts to facilitate a better environment for Cyclists and drivers of Motor Vehicles would be appreciated. The connectivity of the Bike Lanes in Collier County are definitely in need of improvement! Too many gaps that leave cyclists vulnerable in traffic. Any doubts? Get on a bike and you will 'self educate in minutes! Thank You.!
		Take Care,!
		Pete
16	Nov 29, 2013 11:21 PM	Don't like multi-purpose walking/bike/roller blade sidewalks as they are too crowded for bicyclists and walkers or people with baby strollers. North Collier has no bike lane and t is dangerous to cross if there is no crosswalks.
17	Nov 29, 2013 11:07 PM	We need more bike lanes to connect existing bike lanes. Example: I live in Golden Gate and weekly ride to the ocean. I generally take Golden Gate Parkway to Airport Rd then I'm forced onto the sidewalk from Airport Rd all the way to Mooring Line Dr. Riding a road bike on a sidewalk especially a narrow, uneven, congested sidewalk is extremely hazardous.!
18	Nov 29, 2013 11:02 PM	Motorists seem to not know the difference with bike paths and where cars AND bikes must share the lane
19	Nov 29, 2013 10:56 PM	Please repair pot holes on gulf shore blvd near and south of beach club
20	Nov 29, 2013 10:55 PM	motorist need more education on cyclist rights to the road.

- Nationally, ALL bike lanes should be entirely GREEN, not an occasional painted bicycle outline (trust, they're fairly ignored). Roadways that must share (vehicle/bicycle), should have GREEN intermittent stripe (same look as the yellow passing lane strips that vehicles have),. Intermittent should be THREE feet into the roadway. Aside from motorists recognizing the bicycle lane, cyclists are often driving through sewer-cap drops, tree branches and side of the road junk.
- 21 Nov 29, 2013 10:52 PM
- Collier's County and Naples City have done a great job in the past 12 years to build an improving Bike lanes/grid infrastructure , However there are major issues to be addressed with lot of disconnects in the grid, creating dangerous spots/zones , huge debris in bike lanes and lack of overall motorists and outdoor workers culture to safely share the road with bikers
- 22 Nov 29, 2013 10:38 PM
- Education is needed for cyclists and motorists alike. I ride about 250 miles/week and see many infractions from both the cyclist and the motorist. Most of the vehicle issues are either ignorance on who has the right-of-way at an intersection or texting while driving. Issues with cyclists most frequently observed is riding the wrong way on a sidewalk (it's a sideWALK, not sideRIDE) and entering an intersection )when autos aren't prepared for them to come from the right..
- 23 Nov 29, 2013 10:34 PM
- Bicyclists and pedestrians should be allowed to share the sidewalks without the pedestrians thinking they own the sidewalk.
- 24 Nov 28, 2013 4:28 AM
- 25 Nov 28, 2013 2:00 AM Thanks for this survey
- Some drivers dont know that they need to give cyclists a clear space of 3 feet when passing. I sometimes ride on Landmark and cars pass far too close.
- 26 Nov 27, 2013 9:13 PM
- 27 Nov 27, 2013 6:20 PM Police should be responsible for all unsafe conditions. Code enforcement takes too long.
- Headphones are a big detriment to enjoyable biking. Most pedestrians have them plugged into their ears, even some bicyclists and motorists. Pedestrians hear nothing on Marco and wonder why they are struck by cars and bikes.
- 28 Nov 27, 2013 5:07 PM
- 29 Nov 27, 2013 2:48 PM Cyclists should follow all road rules.Cyclists should wear helmets.Cycle lights at night
- 30 Nov 27, 2013 12:01 PM too many sidewalks are uneven or broken. at night, some bike riders don't use lights
- Multipurpose sidewalks are not safe for the walker or cyclist. I will not use this on my bike when it hits tourist season.
- 31 Nov 27, 2013 11:44 AM
- I heard multi purpose path is in tye works heading out from publix on barfield out to goodland via san marco. That will be wonderful. You are doing a great job!
- 32 Nov 27, 2013 11:21 AM
- We continue to have "accidents" as long as motorists believe that STOP signs and right turn on RED do not mean coming to a full Stop behind the Wide White line before the crosswalks. The belief seems to be that rolling stops are acceptable in our society.
- 33 Nov 27, 2013 3:35 AM
- There are too many roads with no bike lane (or even a shoulder - s.a. Vanderbilt Dr.) in Collier. There are also very few roads that bicycle commuters can take to cross town North to South and East to West. For example, no safe bike travel along 41, Goodlette, Airport and only parts of Livingston Road. East and west - only Golden Gate & Vanderbilt Beach Road offer bike lanes. There's no safe travel south of Golden Gate (41) or along Immokalee (west of 951). Traffic is not aware of the 3' minimum safe distance law and motorized traffic is most often exceeding the posted limit on these connector roads. ¶
- 34 Nov 26, 2013 12:39 AM Thank you for posting this survey and looking into this matter.
- Bike traffic is to fast! Police do not enforce the speed limit. Bicycles do not stop before crossing streets. ( High risk!) propose the City set bike speed limits, enforce speed limit for cars and bike traffic, educate.
- 35 Nov 25, 2013 12:32 PM
- During "season" it gets so crazy on Marco Island for my safety I cut back my bike riding and try to ride in areas with slow, light traffic.
- 36 Nov 24, 2013 5:34 PM
- 37 Nov 24, 2013 5:27 PM Motorists tend to look one way only at an intersection and fail to see those on bicycles or walking
- On almost every 10 mile bike ride at least 1 motorist pulls out through a cross walk without looking both ways. In a few cases my wife and I were both forced into the bushes to avoid being run over
- 38 Nov 24, 2013 4:26 PM
- Biking on streets bike paths like Barfield is a death wish. Lets face it many drivers are older like me and may not drive as well as they use to
- 39 Nov 24, 2013 3:58 PM
- We have moved here from Colorado, which has a strong biking culture. A big part of the problem here is that many motorist do not respect bicyclists and view them as a nuisance. Efforts should be made to educate the public regarding the law, i.e., bicyclists' rights to ride on streets, the 3' buffer zone for bicyclists, etc. In the incident listed above, the motorist repeatedly honked his horn, once when he was next to me. I gestured my displeasure with his actions. He stopped and we had a heated discussion. The gist of his position was that I had no right to be on the road and when he honked his horn I should have scurried onto the sidewalk. This particular stretch of Marco road has two signs one marking it as a bike path and another that reminds motorists to share the road. Apparently this signage is not enough. I do not believe most motorists know it is legal to cross a double yellow line in order to pass a bicyclist -- they would prefer to run the bicyclist down than cross the double yellow. More education would be helpful.
- 40 Nov 24, 2013 2:40 PM

- It is ridiculous that Marco only has wide multi-use sidewalks in a few areas. Even all main roads do not have multi-use walks - San Marcos, South Heathwood, Winterberry - and many lesser streets have sidewalks in disrepair or lots with no sidewalks, also empty lots with no proper trimming of a walk. There should be wide multi-use walks everywhere and on both sides of the street. Also, bike lanes are too narrow to be considered safe.¶  
Too many people walk in the bike lanes. And, there are many places where construction vehicles are blocking the sidewalks and police do nothing to enforce keeping the walks clear (some owners also block sidewalks with their cars/trucks.
- 41 Nov 24, 2013 2:13 PM
- I live at 1678 San Marco Rd. There is a very nice bike path on San Marco in addition to very nice sidewalks. WHY ARE BICYCLES ALLOWED ON THE SIDEWALKS?? Seems to me cars belong on the road, bicycles on the bike path and pedestrians on the side walk. What am I missing?
- 42 Nov 24, 2013 1:25 PM
- whoever thought of Marco Island's cross walk is another idiot that thinks they know everything. Try riding on them and see.
- 43 Nov 24, 2013 1:16 PM
- 44 Nov 24, 2013 1:13 PM Bike lanes must be on all roads. Max speed for any road can't be over 30 mph. Too much traffic! Marco Island is a wonderful place to bicycle. Keep the improvements coming. Biggest issue are the intersections. Bike lanes stop just before the intersections leaving bicycles and motorists not knowing how to proceed.
- 45 Nov 23, 2013 1:58 PM
- 46 Nov 11, 2013 3:23 PM As a driver, many bicycles on Shadowlawn/Estey Ave that are difficult to see - need better lights along there.
- My parents bought property in 1966 in order for me to have and train horses. When it was bought, we were surrounded by woods and plenty of trails to ride them one, the roads around us were safe to ride on. Now, subdivisions surround us and traffic is horrible.
- 47 Nov 7, 2013 3:53 PM
- After the experience I had two years ago I rarely walk because there is no sidewalks, not enough lightning, and I feel unsafe.
- 48 Nov 6, 2013 9:10 PM
- I enjoy being active and riding a bicycle vs. taking the car. It is great exercise and helps reduce motorist traffic. However I never feel relaxed or very safe while riding on Marco Island. I always wear a helmet and a very bright florescent shirt and follow the rules in order to do my best to avoid being involved in an accident.
- 49 Nov 5, 2013 2:25 PM
- Please hurry as way too many close calls on my bike so and I cut back on my riding during the season and drive my car to do errands.¶  
Thanks for your help.
- 50 Nov 4, 2013 10:26 PM
- I frequently see cyclists riding in the wrong direction in the bike lane on an arterial roadway; an extremely dangerous condition. Vehicles frequently have their view obstructed (be a vehicle in front) and can not see the on-coming cyclist and have little time to react , e.g., crossing over the bike lane while entering a turn-lane. Law enforcement personel should stop the offending cyclist and explain the dangers of riding against traffic.¶  
¶  
Additionally, public service announcements on TV showing the dangers of riding against traffic would als be beneficial.-
- 51 Nov 4, 2013 1:09 PM
- 52 Nov 1, 2013 12:20 PM We like to try to be healthy, and realease stress, and this is the way we do it.
- It would be nice to have some type of barrier to warn drivers the are to close to the bike lane and should give the bicyclist a chance to enjoy his ride...
- 53 Nov 1, 2013 12:43 AM
- I think that we need to complete the path (whether itis sidewalks or bike paths to enhance safety. Additionally, the more facilites are used the more drivers will begin to expect them along side of them on the road and hopefully be more caucious.
- 54 Oct 31, 2013 7:42 PM
- A great majority of Immokalee residents walk or bike to get to a location. Also, many (including myself) avoid walking or biking due to the lack of sidewalks and bike lanes.
- 55 Oct 31, 2013 3:43 PM
- More signage especially in neighborhoods where persons with low vision live alerting motorists to blind people/children/bicycles/ pedestrians. More signage reminding motorists to yield to pedestrians and bicycles in crosswalks.
- 56 Oct 31, 2013 2:28 PM
- people around here don't always respect bicycles and pedestrians. the culture needs to change for some people
- 57 Oct 30, 2013 8:08 PM
- 58 Oct 30, 2013 6:04 PM I hope this survey is not in vain. Because we do need more bicycle lanes.
- Given all the other things Collier County government chooses to spend money on, the least they could do is spend some portion of funding on the creation of bicycle paths off the roadways similar to what other counties have done. Pinellas County is a great example. Bike paths would offer people a safe and healthy opportunity for more exercise.
- 59 Oct 30, 2013 5:48 PM
- 60 Oct 30, 2013 5:19 PM please place lights on the states!!
- I see kids riding their bikes in Chokoloskee on the road all day and sometimes after dark and high school kids jogging at sunset when it is cooler-also on the road which I think is very unsafe.
- 61 Oct 30, 2013 5:07 PM
- Alot of people do not pay attention while driving but also there are issues with the pedestrians that walk all over the road even it there is a sidewalk to walk along.
- 62 Oct 29, 2013 12:26 PM

- Drivers frequently pull past stop line at intersections, looking to left for cross, right-of-way traffic before turning right or crossing a street, failing to look for cyclists legally crossing with a green light, i.e., 'stopping on red' (often a 'rolling stop'), only to look briefly to left for right-of-way motorized vehicles, not considering possible approach of cyclists on right, who might be crossing the intersection perpendicular to the right-turn vehicle, or turning right with the right-hand-turning vehicle.
- 63 Oct 29, 2013 12:42 AM  
64 Oct 28, 2013 4:40 PM Not walker friendly
- Two most dangerous problems: Motorists who cross the crosswalk without stopping and then look only one way. Joggers and walkers with earphones oblivious to the world.
- 65 Oct 28, 2013 4:38 PM  
66 Oct 28, 2013 4:04 PM Immokalee needs more traffic lights
- Motorists do not understand the traffic laws. They believe that cyclists should not be on the roadways. There should be more public education as to the rights of cyclists to use the roadways.
- 67 Oct 28, 2013 2:56 PM
- Many roads in Immokalee do not have sidewalks and yet are often traveled by many bicyclists/pedestrians. Many roads are very dark with little/no lights. This is unacceptable.
- 68 Oct 28, 2013 12:26 PM
- Although I am a bike rider(as well as pedestrian) I think that many bike riders, especially the "sport" ones think they are cars when it suits them and bikes when its easier. I do not like to see bike riders on Immokalee road on the street and riding across intersections like they were cars. Even though I am very aware ok bikers, often you don't see them next to you crossing the street and there is not suffient room to pass them. It is a dangerous situation.
- 69 Oct 28, 2013 12:21 PM
- Traffic enforcement is MOST important to be put on steroids during season -- the driving gets worse, the # of drivers multiplies, and the # of walkers/bicyclists increases. It shouldn't be status quo, there should be a surge when they first come to catch all the crosswalk runners and remind them all of the speed limit and what the yellow and white lines mean and no changing lanes in the intersections, etc. Then surge again after Christmas with the next wave of snowbirds to remind the latecomers. It keeps them safe and schoolkids and the streets in general. Plus it would keep the road rage down.
- 70 Oct 28, 2013 3:09 AM
- We need to educate motorist on how to drive safely along with cyclists. Runners need to be educated oh how to use bicycle lanes.
- 71 Oct 27, 2013 5:25 PM
- More signage reminding motorists turning right on red to yield to people in crosswalks would help. I wrote "people" on purpose and not pedestrians because I want to include bicyclists, people in wheelchairs and in baby strollers.
- 72 Oct 27, 2013 4:03 AM
- Naples area is a great place to bike but a very small percentage of the drivers are very hostile to bikes. There is the growing threat of distracted drivers.]]
- 73 Oct 26, 2013 8:03 PM Law enforcement will not enforce laws against agressive drivers
- Landscaping truck was not paying attention and ran me off the road and into the swale, and kept on going. I fell over injuring my wrist and damaging my bike. Seagrape does not have a paved shoulder and is very dangerous.
- 74 Oct 26, 2013 11:33 AM

2	Oct 25, 2013 8:03 PM	gracias!!

En algunas intersecciones como Airport Rd y 41, cuando aparece la senal para cruzar Airport Rd tambien el semaforo cambia a verde para los vehiculos en la 41, asi que dan vuelta a la derecha y casi nadie frena un poco para dejar pasar, al contrario hasta pitan cuando uno se cruza la calle, y digo casi nadie por que una que otra persona si dan el paso a los peatones y bicicletas. De antemano gracias por

# Appendix D: Public Involvement, Report Revisions and Response to Comments

## Public Involvement, Report Revisions and Response to Comments

### Public Involvement

Public Involvement played an integral part throughout the development of the Pedestrian and Bicycle Safety Study. The Pathways Advisory Committee worked on components of the Safety Study during their meetings. Interested public contributed during the meetings as well. All MPO meetings are noticed and open to the public. Public comments are always welcome during the meetings.

A MPO webpage was dedicated to the Safety Study from the beginning of the project for the purpose of keeping the public up-to-date. This page highlighted the newest developments of study components as well as provided links to the safety survey questions.

As part of the MPO's Public Involvement Plan, a 21-day public comment period is required for all draft studies and plans prior to MPO Board consideration for adoption – including this Pedestrian and Bicycle Safety Study. The comment period for the final draft document was open from January 10 through January 31, 2014. The Study was posted on the MPO's website in a front page news story during the public comment period. The Study and Comment forms were made available at the ten Collier County Public Libraries and also at jurisdictional government offices. Final revisions to the document were made based on comments received.

The final draft of this report was presented to the Pathways Advisory Committee on January 24, 2014, and the Technical Advisory Committee and the Citizen's Advisory Committee on January 27, 2014.

Overall, the comments for the study were very positive - with the work being very well received and many of the committee members appreciating the presentation of the data. A number of comments were made about continuing to build on the work.

There was more discussion than specific comments and those comments from each meeting are presented as follows:

#### **Pathways Advisory Committee (PAC) Meeting January 24, 2014:**

One of the members asked that the 2 lane collector roads and local streets be shown in different colors on the roadway map.

*Response: The map on page 24 has been modified to show local streets as a different color.*

#### **Citizen's Advisory Committee (CAC) Meeting January 27, 2014:**

One member inquired about the location of the crashes as presented in the chart of page 9. A comment was made about the location of crashes, City of Naples or outside?

*Response: In response to the inquiry, the location data was reviewed for the crashes in question. The review showed that while there are some inconsistencies in how locations are identified, for the vast majority the locations noted in the data were correct. It should be noted that the responding officer has the option to enter the location of the crash, so a difference in labeling (e.g. Naples City as opposed to Naples, but both within City limits) was possible.*

#### **Technical Advisory Committee (TAC) Meeting January 27, 2014:**

A member asked for clarification of what "Other" meant on page 58 with the survey question: "If not reported, why was it not reported?"

*Response: The survey response options included an "Other" category. Participants could then specify what that meant if they chose to do so. The responses are included on the same page. Survey responses for reasons for*

*crash or near miss included the following: Didn't get the license plate, there was no injury, what could the police do?, did not have my cell phone, etc. See page 58-59 for the entire list.*

**Additional changes made:**

A QR code has been added to the document

**Endorsement:**

The PAC endorsed the document at the January 24, 2014 meeting and the CAC and TAC endorsed the document at their meetings on January 27, 2014.
